LEADING NEUROLOGICAL DEVICE COMPANY SELECTS
AGNEW TECH-II TO TRANSLATE VIDEO ON COCHLEAR IMPLANTS FOR
THE SOUTH AMERICAN SPANISH

Westlake Village, CA – April 2006 - Agnew Tech-II was selected by Advanced Bionics in California to produce voiceover for the "Cecilia's Story Video" into Spanish for South America impaired. Agnew worked with a selected team of translators/editors on the adaptation of the script for use in the South American market as well as in the casting of all narrators and the creation of subtitles in Spanish for the deaf impaired.

This video is based on a true story of a little girl diagnosed with hearing loss when she was 15 months old and who was fitted with hearing aids and taught English sign language to support her parent's voices with a manual technique.

At the age of three Cecilia was an ideal cochlear implant candidate. After undergoing the operation and many small steps and months of waiting she surprised her mother one day when she turned and responded to her clapping by clapping back. After 3 years she is a totally independent girl who follows study skills to keep up with the classroom work and with other children.

Agnew Tech-II is proud to have worked on the production of this educational video which will inspire families of deaf impaired individuals to look for new alternative solutions to improve their life style.

About Advanced Bionics

Advanced Bionics a global leader with offices in California, makes the HiResolution Bionic Ear System, which includes a cochlear implant, a sound processor, and other equipment that together can restore hearing to the deaf
